

Task 3: Dynamic Login System

Design a Dynamic Login System using HTML, CSS, and JavaScript that includes Username, Password, Show/Hide Password, Input Validation, Local Storage Checking, and Login Status Message. Validate the user input, compare the entered credentials with stored values using localStorage, and display whether login is successful or invalid.

INDEX.HTML:

```
<!DOCTYPE html>
<html>
<head>
  <title>Dynamic Login System</title>

  <style>
    body {
      font-family: Arial;
      background: #0f2027;
      color: white;
      display: flex;
      justify-content: center;
      align-items: center;
      height: 100vh;
    }

    .login-box {
      background: #203a43;
      padding: 30px;
      border-radius: 10px;
      width: 300px;
      text-align: center;
    }

    input {
      width: 90%;
      padding: 10px;
      margin: 10px 0;
```

```
border: none;
border-radius: 5px;
}

button {
padding: 10px 20px;
background: #00c6ff;
border: none;
border-radius: 5px;
cursor: pointer;
}

.error {
color: #ff6b6b;
font-size: 14px;
}

.success {
color: #00ffcc;
}

.shake {
animation: shake 0.3s;
}

@keyframes shake {
0% { transform: translateX(0); }
25% { transform: translateX(-5px); }
50% { transform: translateX(5px); }
75% { transform: translateX(-5px); }
100% { transform: translateX(0); }
}

.toggle {
cursor: pointer;
font-size: 12px;
color: lightblue;
}
</style>
```

```
<script>
localStorage.setItem("user", "admin");
localStorage.setItem("pass", "1234");

function validateInput(id, message) {
  let field = document.getElementById(id);
  let error = document.getElementById(id + "Error");

  if (field.value.trim() === "") {
    error.innerHTML = message;
    field.style.border = "2px solid red";
    return false;
  } else {
    error.innerHTML = "";
    field.style.border = "2px solid green";
    return true;
  }
}

function togglePassword() {
  let pass = document.getElementById("password");
  pass.type = pass.type === "password" ? "text" : "password";
}

function login() {
  let user = document.getElementById("username").value;
  let pass = document.getElementById("password").value;

  let box = document.querySelector(".login-box");
  let message = document.getElementById("message");

  let validUser = validateInput("username", "Enter username");
  let validPass = validateInput("password", "Enter password");

  if (!validUser || !validPass) return;

  let dbUser = localStorage.getItem("user");
  let dbPass = localStorage.getItem("pass");
```

```

    if (user === dbUser && pass === dbPass) {
        message.innerHTML = "✅ Login Successful!";
        message.className = "success";
    } else {
        message.innerHTML = "❌ Invalid Credentials!";
        message.className = "error";

        box.classList.add("shake");
        setTimeout(() => box.classList.remove("shake"), 300);
    }
}
</script>
</head>

<body>

<div class="login-box">
    <h2>Login</h2>

    <input type="text" id="username" placeholder="Username"
        onkeyup="validateInput('username','Enter username')">
    <div id="usernameError" class="error"></div>

    <input type="password" id="password" placeholder="Password"
        onkeyup="validateInput('password','Enter password')">
    <div id="passwordError" class="error"></div>

    <span class="toggle" onclick="togglePassword()">Show/Hide Password</span>
    <br><br>

    <button onclick="login()">Login</button>

    <p id="message"></p>
</div>

</body>
</html>

```

OUTPUT:

Login

admin

....

Show/Hide Password

Login

✓ Login Successful!
